No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic assays to detect and quantitate the presence of similar nucleic assays to detect and quantitate the presence of similar nucleic assays to detect and quantitate the presence of similar nucleic assays to destorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide the expression and activity. The present sequence is a GENSET pucleic acid of
                                                                                                                                                                           Full length GENSET human nucleic acids encoding potentially secreted proteins, useful in gene therapy and vaccination against a variety of diseases, and for diagnosis of those diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 7; Page 579; 921pp; English

The polypeptides are also useful to improve physical performance during work or exercise, and to treat dyslexia, attention-deficit disorder, attention-deficit/hyperactivity disorder, and psychiatric disorders such as schizophrenia. The present sequence encodes human GSSP3 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide, and polynucleotide sequences that encode it. The GSSP3 polypeptide reduces circulating blood glucose levels, increases insulin sensitivity, and/or reduces body mass. The GSSP3 polypeptide and polynucleotide sequences are useful in serum glucose regulation, fatty acid metabolism, body weight loss, and prevention of body weight gain. Compositions comprising GSSP3 polypeptides are useful for controlling blood glucose levels, for treating metabolic-related diseases or disorders (e.g. obesity, impaired glucose tolerance, insulin resistance, hyperlipidaemias, atherosclerosis, heart disease, hypertension, stroke, syndrome C, type I or II diabetes, diabetes related complications,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Reducing circulating glucose levels or increasing insulin sensitivity, useful for reducing body mass or preventing body weight gain, comprises administering composition comprising GSSP3 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Yen-Potin F;

The invention relates to an isolated polypeptide comprising CGDD1-12 (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to CGDD, a biologically active CCC acid sequence at least 90% identical to CGDD, a biologically active fragment or an immunogenic fragment. Also included are the comprising a promoter sequence operably linked to the CGDD comprising a cell transformed with the recombinant polynucleotide, an anticody, screening for compounds which bind to/modulate or are antibody, screening for compounds which bind to/modulate or are compliants of CGDD or alter the expression of CGDD polynucleotide and account antibody, screening for compounds which bind to/modulate or are compliants of CGDD polynucleotide microarray. The polypeptides, polynucleotide and a cGDD polynucleotide microarray. The polypeptides, polynucleotide and account and antagonists are useful for diagnosing, treating or comprises of CGDD reventing disorders associated with aberrant expression of CGDD, particularly cell proliferative (e.g. arteriosolerosis, atherosolerosis, cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia cycles, particularly cell proliferative (e.g. arteriosolerosis, polycythaemia cycles; paroxysmal nocturnal haemoglobinuria, polycythaemia cycles; cirrhosis, proriasis, primary thromobocytopaemia or cancer), development of disorders (e.g. renal tubular acidosis, anaemia or mental retardation), neurological disorders (e.g. Alzheimer disease, parkinson's disease or cyclesis, productis, contact dermatitis, crohn's disease, parkinson's disease or cyclesis, cacquired immunodeficiency syndrome) allergies, asthma, autoimmune cyclement, and the area also useful in the assessment of the effects of conferce and produced or account of the effects of conferce and produced or account of the effects of conferce and produced or account of the effects of conferce and produced or account of the effects of a conferce of produced or account of the effects of a conferce 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                148

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the isolation of genes (AAC69512-C69587) encoding 62 human secreted proteins (AAB38321-B38396). The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G FC portion (AAC69503) for increasing the stability of the fusion protein as compared to the human protein only. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the disgnosis, treatment and prevention of: (a) autoimmune diseases e.g.

The present invention relates to novel human secreted proteins (ABR41633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins can their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary artistisclerosis and mycazdial ischaemia), neural disorders, immune system disorders, pulmonary disorders, renal disorders, immune system disorders and/or cancerous diseases and conditions, for conditions and epithelial cell proliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating or preventing neural damage which occurs in neuronal disorders or preventing neural damage which occurs in neuronal disorders or preventing neural damage which occurs in neuronal disorders or containing or neurodegenerative conditions such as Alzaimer's diseases and bane contained and periodontal resembation and aid in tissue transplants or bone grafts, to prevent skin aging or hair loss, to transplants or bone grafts, to prevent skin aging or hair loss, to organs before transplantation or for supporting cell culture of primary corgans before transplantation or for supporting cell culture of primary corgans before transplantation or for supporting cell culture of primary cells metabolism. Note: The sequence data for this patent was published in celetronic format and is available from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ArgValValSerGluGluThrLeuLeuPheGlnThrGluLeuTyrPheThrProArgAsn 100

protein genes, and ABP00011-ABP00299 represent the proteins they encode.

Divotein genes, and ABP00011-ABP00299 represent the proteins they encode.

ABZ71479-ABZ714740 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, continued in drug screening, and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing digestive disorders. Such conditions include disorders of the mouth, coesophagus, stomach, small intestine, large intestine, liver, billary tract and pancreas, and include cancers of these organs and tissues. The secreted proteins and their nucleic acids may also be used in the secreted proteins and their nucleic acids may also be used in the creatment of immune disorders, inflammation, inflection, chromosome coff the invention may be used for chromosome identification, chromosome mapping, in gene therapy, for identifying individuals from minute

The invention relates to isolated nucleic acid molecules ADB91065-
ADB91448 and ADB91835-ADB91911 encoding human secreted proteins ADB91449-
ADB91843. Also disclosed is a recombinant vector comprising a
polynucleotide of the invention, and a recombinant host cell comprising
the recombinant vector. The polypeptide of the invention is useful in
the recombinant vector. The polypeptide of the invention is useful in
the recombinant vector. The polypeptide of the invention is useful in
the recombinant vector. The polypeptide of the invention is useful in
the recombinant vector. The polypeptide of the invention is useful in
the cases activity of the polypeptide. The polypeptide with a
binding partner, and determining whether the binding partner increases or
decreases activity of the polypeptide. The polypeptide of polynucleotide,
antibody or its fragment, agonist or antagonist are useful for preparing
antibody or its fragment for diagnosing or treating diabetes or
conditions related to diabetes. The present sequence is that of the human
immunoglobulin Fc portion used to generate fusion proteins, increasing
the stability of the fused protein as compared to the secreted protein
conly. Note: The sequence data for this patent did not form part of the
printed specification, but was obtained in electronic format directly
from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel human secreted polypeptide comprising a defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnosing or treating a haemopoletic or haematologic disorder such as anaemia, autoimmune disorders such as rheumatoid arthritis, inflammation, Grave's disease, disorders including parthinson's disbetes, systemic lumps erythematomus or glomerulonophritis, neurodegenerative disorders including Parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including atherosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide may also be used during gene therapy procedures and for identifying a binding partner by contacting the polypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide. The current sequence is that of the human secreted protein-related DNA of the invention.

The invention discloses a polynuclectide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel colypeptides. Also claimed is a polypeptide encoded by the polynuclectide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynuclectide, immunologically assaying the polypeptide or peptide of the polynuclectide by contacting the polypeptide or peptide of the manipody of the encoded protein, and observing the binding between the two, a transformant carrying the polynuclectide in peptide or expressible manner and an antisense polynuclectide. The oligonuclectide is useful as a primer for synthesising the polynuclectide in a a probe for detecting the polynuclectides and encoded proteins are useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related of genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell regeneration. Membrane proteins, signal transduction-related proteins, cof generation of used so indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein or treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence activity or expression of the invention. Note: Some of the sequence is based on sequence information supplied by the European Patent Office.
polynucleotides and polypeptides, useful for developing a diagnostic ter or medicines for regulation of their expression and activity, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1492 BP; 452 A; 250 C; 272 G; 518 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length:

The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of the

The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps

potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's gene patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide expression and activity. The present sequence is a GENSET nucleic acid of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       137 Argacerragaagrerrgargerecresergrerragarragaecegragaagaacere 196

This invention relates to novel polymucleotides encoding human secreted proteins. Specifically, it refers to the vectors, host cells, recombinant and synthetic methods for producing human polymucleotides, polymetides can darkthetic methods for producing human polymucleotides, polymetides can antibodies. Furthermore, it relates to escreening methods to identify agonists and antagonists that can be used to inhibit or enhance the production and function of the secreted proteins. The present invention describes these compositions as useful for diagnosing, treating or production and multiple myeloma, reproductive system disorders including prostatitis and inguinal hermia, musculoskeletal diseases including systemic lupus erythematosus and gout, cardiovascular disease including systemic lupus erythematosus and gout, cardiovascular disease including strathymia and hypernatraemia, mixed fetal diseases including fetal alcohol syndrome and bown's syndrome, excretory disease including curinary incontinence and renal disorders, neural or sensory disease including curinary incontinence and corupational lung disease, endocrine diseases including cortal hypertension and irritable bowel syndrome and connective tissue or portal hypertension and irritable bowel syndrome and connective tissue or epithelial diseases including scleroderma and espidermolysis bullosa. As such, there are various activites such as extostatic, antianemic, antiarthritic, antiasthmatic, anti-HIV, immunosuppressive,
           irritable bowel syndrome; epithelial disease; scleroderma; epidermolysis bullosa; cytostatic; antianemic; antiantitic; antiantitic; antiantestimatic; anti-HIV; immunosuppressive; antiinflammatory; antipschmatic; antibecrail; osteopathic; dermatological; antiout; inflammatory; antipscripting; cardiant; noctropic; antipscripting; cardiant; noctropic; antilipemic; nephrotropic; uropathic; neuroprotective; antiparkinsonian; tranquilizer; antidabetic; anabolic; hypertensive; vulnerary; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acids and polypeptides, useful for diagnosing, treating, preventing or ameliorating diseases or disorders e.g. cancer, anemia, arthritis, asthma, inflammatory bowel disease or Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Greene JM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Florence KA, Gree

This polynucleotide is a DNA fragment encodes a human secreted protein of the invention of electronic format from the US patent office at the www.seqdata.uspto.gov/sequence.html; Document ID: X Sequence 5013 BP; 1442 A; 909 C; 826 G; 1836 T; 0 lignment Scores: 6.29e-30 Length: core: 21.8\$ Conservative:	ty: 21.8% 40.7% 12 x ADJ12678 (1-153) x ADJ12678 8T1eSerCysSerLeuAsp7 AATAAGTTGCTCTCTGAACA	ArgasnleutyrilePhealaAspGluleuHisleuGlyMetGlyCysProAlaAsnArg	Qy 81	Qy 81	421 ATTATATTTTACTAAATATTAGCAGACTGCTTTAAATTTTGTGTGATTCTTCTAATGTGG 81	Db 541 AIGTTCCAIGAGAATTTGTGTAAATATATAGTGGATTTTCATTGAAATGTGTATGT 600 Qy 81	Qy 81

```
Furthermore, the nucleic acids and polypeptides may also be used to identify molecules that modulate or inhibit neurogenesis, cell differentiation and proliferation, haemopoiesis, wound healing and anglogenesis, as well as in gene therapy. Finally, the nucleic acids be used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. The current sequence is that of
The present invention relates to the isolation of human GSSP3

polypeptide, and polynucleotide sequences that encode it. The GSSP3

polypeptide reduces circulating blood glucose levels, increases insulin

sensitivity, and/or reduces body mass. The GSSP3 polypeptide and

caid metabolism, body weight loss, and prevention of body weight gain.

Compositions comprising GSSP3 polypeptides are useful for controlling

blood glucose levels, for treating metabolic-related diseases or

clasorders (e.g. obesity, impaired glucose tolerance, insulin resistance,

thyperlipidaemias, atherosclerosis, heart disease, hypertension, stroke,

syndrome C, type I or II diabetes, diabetes related complications,

cyndrome, ocular lesions, microangiopathic lesions, or syndromes such as

carathosis nigricans, leprechaunism and lipoatrophy). The polypeptides

carathosis nigricans, leprechaunism and lipoatrophy). The polypeptides

canthosis nigricans, leprechaunism and lipoatrophy). The polypeptides

and to treat dyslexia, attention-deficit disorder, attention-

deficit/Apperactivity disorder, and psychiatric disorders such as

chizophrenia. The present sequence encodes human GSSP3 polypeptide

The polypeptide of the invention demonstrates, antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, virucide, antiparterial, fungicide, protozoacide, nootropic, neuroprotective, antiparkinsonian, anticonvulsant, osteopathic, antiarthritic, antiinflammatory, dermacological, antiarthmatic and antilipaemic activities. The polypeptides, nucleic acid molecules and antibodies may be useful for treating or diagnosing diseases including metabolic disorders such as diabetes and obesity, infectious diseases, anorexia, cancer, cardiovascular diseases including mypertension and atherosecterosis, neurodegenerative disorders such as Alzheimer's disease, Parkinson's disease and epilepsy, immune disorders e.g. osteoarthritis, haemopoietic disorders, inflammatory skin disorders, asthma and dyshipidaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated NOVX polypeptides and polymucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

Patent No. 639063

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Glordano, J.Y.

TITLE OF INVENTION: ESTS and Encoded Human Proteins.

FILE REFERENCE: GENSET. 054PR2.

CURRENT APPLICATION UNMER: US/09/621,976

CURRENT FILING DATE: 2000-07-21

NUMBER OF SEQ ID NOS: 19335

SOFTWARE: Patent.pm

SEQ ID NO 1362

LENGTH: 642
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  642

Sequence 15949, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: WENTER, J. Craig et al.
TITLE OF INVENTION:
PITLE OF INVENTION:
PITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03
